RE: SOIL SAMPLING AND EXCAVATION WORK PLAN ADDENDUM

Dear Ms. Tasnif-Abassi:

This Work Plan Addendum is provided to notify DTSC of an additional soil disposal facility to be used when transporting soil from the former Riverside Agricultural Park located at 7020 Crest Avenue in Riverside, California. Based on soil sampling efforts conducted in November 2015, as documented in the *Former Riverside Agricultural Park Soil Sampling Report* dated January 6, 2016, it was determined that surface soil with polychlorinated biphenyl (PCB) concentrations above the cleanup goal of 0.22 milligrams per kilogram (mg/kg) was present at select locations. The TRC document *Soil Sampling and Excavation Work Plan* dated July 26, 2016 was submitted to DTSC to describe activities to remove the PCB-impacted soil from the Site. A list of disposal facilities authorized to receive soil containing PCBs below 50 mg/kg during remediation efforts at the Site was provided in the Work Plan. Since the date of the Work Plan submittal, an additional disposal facility was identified and is being used to dispose of PCB-impacted soil with concentrations below 50 mg/kg. This facility is the Waste Connections, Inc. Chiquita Canyon Landfill at 29201 Henry Mayo Drive, in Castaic, California.

If you have any concerns regarding this transmittal, please contact David Lennon at (949) 341-7458.

Sincerely,

David Lennon  
Principal Consultant
